Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 16-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Krikke et al. (U.S. Patent App. No. 2002/0036763) .

Regarding claim 16, Krikke et al. discloses a means for varying a field height of an illumination beam(para 0075); and means for varying a pupil of the illumination beam(para 0083), such that radiometric efficiency is continuously maintained(para 0083).

Regarding claim 17, Krikke et al. discloses means for relaying the illumination beam(fig 2, CO).

Regarding claim 18, Krikke et al. discloses means for measuring a characteristic of the illumination beam and generating a control signal; and means for controlling at least one of the means for varying the field height and the means for varying the pupil based on a value of the control signal(para 0084).

Regarding claim 19, Krikke et al. discloses (a) varying a field height of an illumination beam(para 0075); and varying a pupil of the illumination beam(para 0083), such that radiometric efficiency is maintained(para 0083).

Regarding claim 20, Komatsuda et al. discloses (c) relaying the illumination beam(fig 2, CO).

Regarding claim 21, Komatsuda et al. discloses, measuring a characteristic of the illumination beam; generating a control signal based on the measuring; and controlling at least one based on a value of the control signal(para 0084).

Allowable Subject Matter

Claims 1-15 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art taken either singularity or in combination fails to anticipate or fairly suggest the limitations of the independent claim, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented in independent claims 1, with the allowable features being a second zoom system for changing the pupil of the illumination. Therefore claims 1-15 are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Timothy J. Thompson whose telephone number is (571) 272-2342. If the examiner can not be reached his supervisor, Georgia Epps, can be reached on (571) 272-2328.
